Examiner's amendment

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. John Preta (Reg. No. 43,017) on June 2, 2010.

a. Claims 43 and 44 have been canceled.

b. Claims 4-7 were previously withdrawn, now, they have been rejoined.

Because all claims previously withdrawn from consideration under 37 CFR 1.142 have been rejoined, **the restriction requirement as set forth in the Office action mailed on 02/07/05 is hereby withdrawn.** In view of the withdrawal of the restriction requirement as to the rejoined inventions, applicant(s) are advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once the restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Art Unit: 3731

c. Please add claims 49 (New) and 50 (new) below to the claim set.

49. (New) A lancet device having depth of penetration adjustment, comprising:

a body comprising a front end and a rear end;

a trigger arranged closer to the front end than to the rear end;

a removable front cover comprising a skin engaging end that includes a lancet opening through which a lancet needle may extend;

a holding member movably mounted within the body and comprising a rear end and a front end configured to receive a lancet;

the holding member comprising a deflecting portion;

the trigger being configured to cause the deflecting portion to disengage from a retaining surface during triggering of the lancet device;

a wall arranged within the housing;

the front end of the holding member being arranged on one side of the wall and the rear end of the holding member being arranged on another side of the wall;

a first spring structured and arranged to move the holding member to an extended position and comprising one end which contacts a portion of the holding member;

a second spring structured and arranged to move the holding member from the extended position to an intermediate position;

a first stop surface arranged on the holding member at a location that is closer to a front end of the body than to a rear end of the body when the holding member is in the intermediate position;

a second stop surface configured to be contacted by the first stop surface and being arranged closer to the front end of the body than to the rear end of the body;

a cocking mechanism structured and arranged to move the holding member to a retracted position when the cocking mechanism is moved toward the rear end of the body;

the cocking mechanism comprising a first portion arranged within the body and a second portion extending out side the body;

the second spring being arranged within the body and being structured and arranged to bias the cocking mechanism toward the front end of the body; and

a depth adjustment mechanism,

wherein contact between the first and second stop surfaces defines the extended position.

50. (New) The lancet device of claim 49, wherein the cocking mechanism is movable along a direction parallel to an axis of the body, wherein the depth adjustment mechanism is configured to rotate relative to the body, wherein the first spring comprises another end which contacts the wall, wherein an axis of the first second spring is axially aligned with an axis of the second spring, and wherein the first and second springs are axially spaced apart and are arranged between the trigger and the rear end of the body.

Art Unit: 3731

2. The following is an examiner's statement of reasons for allowance: The prior art of record does not appear to disclose or suggest a motivation to combine a lancet device, comprising, inter alia: a body, a front cover is coupled to the front end of the body and a lancet holding member has a first stop that is being arranged closer to the front end of the holding member than to the rear end of the holding member. The front cover has a skin engaging surface. A second stop surface is non-movably coupled to the body of the lancet device and second stop surface is extending inwardly from the body and being arranged closer to a front end of the body than to a rear end of the body and between the first stop surface and the skin engaging end of the front cover, wherein contact between the first and second stop surfaces defines a puncturing position of the lancet needle.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to TUAN V. NGUYEN whose telephone number is (571)272-5962. The examiner can normally be reached on 9:00 AM - 5:00 PM.
